MATH(JOSS): USER'S REFERENCE MANUAL

John Disbrow, Mal Haggerty
Roger Harvey, Howard Smith

IBM Corporation
Advanced Systems Development Division
New Systems and Services, Dept. 935
Los Gatos, California

SUMMARY

MATH(JOSS) is a problem solver for people who are not programmers and who do not wish to become programmers.

This document is a reference manual with an extensive index and numerous examples. However, it is not, by itself, an introduction to the system. You first become acquainted with MATH by trying it. The computer assists you. Information on how to get started is found on page 3.

MATH has been operating within IBM since the fall of 1967. It is in daily use by IBMers and is currently available on five systems located throughout the corporation.

ACKNOWLEDGMENT

This document is very similar to the memorandum upon which it is based: THE JOSS NOTEBOOK by G. E. Bryan and E. W. Paxson of the RAND Corp. (RM5367-PR).

MATH is based on JOSS. The JOSS system was originally created by J. C. Shaw and his associates at the RAND Corporation. The much more powerful second version of JOSS was developed by C. L. Baker, G. E. Bryan, I. D. Greenwald, and J. W. Smith.

CONTENTS

SUMMARY	i
ACKNOWLEDGMENT	ii
Section	
I. INTRODUCTION	1
Desk Calculator	1
Library Programs	2
Problem Solving	3
Math Lessons	3
II. MECHANICS	4
Preliminary Procedures and Sign-on	4
Two Keyboards.	8
Two-Color Printing	11
III. GENERAL POINTS	12
Rules of Form	12
Precedence Rules	13
Editing	14
Values	15
Direct and Stored Commands	16
Order of Program Execution	17
Value Ranges	18
Arrays	19
Summary of Ranges	20
Files	21
Bugs and Failures	21
Error Messages	22
IV. VOCABULARY	23
MATH Objects	23
Do	24
To	26
Done/Quit	27
Stop/Cancel/End	29
Go	30
Delete	31
Set	32
Let	33
for/times	35
if	36
Type	37
timer	38

size	39
Demand	40
sparse	41
Form	42
Line/Page/Head/\$	44
summary	45
Store/Delete/Get	46
Chaining	47
File Warning	47
Parenthetic Computation	48
 V. FUNCTIONS	 49
Basic Functions	
(sqrt, log, exp, sin, cos, arg).	49
Number Dissection Functions	
(sgn, ip, fp, dp, xp, ...)	50
Special Functions	
(max, min, sum, prod, first)	51
Logical Functions (Expressions)	
(and, or, not)	53
Translation Value	54
Conjunction/Disjunction	55
Conditional Functions (Expressions)	56
Recursive Functions	57
 VI. SAMPLE PROGRAMS	 58
Program Layout	58
Volume Calculation	59
Prime Numbers	60
Computing Efficiency--I	61
Computing Efficiency--II	62
Computing Efficiency--III	63
Degree-Radian Conversion Formulas	63
Boolean Functions	64
Program Chaining	65
Root Finding	66
Gaussian Integration	66
Probability Integral	67
 SUMMARY OF MATH LANGUAGE	 68
